**Report – Report can be typed or hand written for up to two pages.**

### Management and leadership

Many wonder about the differences between leadership and management. Are they mutually exclusive? Do professionals have both qualities—or do they learn one or the other over a long period of time? These questions are just the tip of the iceberg. In this article, we will take a look at both.

#### **What is Leadership? What is Management?**

The words “leader” and “manager” are among the most commonly used words in business and are

often used interchangeably. But have you ever wondered what the terms actually mean?

### What Do Managers Do?

A manager is the member of an organization with the responsibility of carrying out the four important functions of management: planning, organizing, leading, and controlling. But are all managers leaders? Most managers also tend to be leaders, but only IF they also adequately carry out the leadership responsibilities of management, which include communication, motivation, providing inspiration and guidance, and encouraging employees to rise to a higher level of productivity. Unfortunately, not all managers are leaders. Some managers have poor leadership qualities, and employees follow orders from their managers because they are obligated to do so—not necessarily because they are influenced or inspired by the leader. Managerial duties are usually a formal part of a job description; subordinates follow as a result of the professional title or designation. A manager's chief focus is to meet organizational goals and objectives; they typically do not take much else into consideration. Managers are held responsible for their actions, as well as for the actions of their subordinates. With the title comes the authority and the privilege to promote, hire, fire, discipline, or reward employees based on their performance and behavior. Leadership is setting a new direction or vision for a group that they follow, ie: a leader is the spearhead for that new direction. Management controls or directs people/resources in a group according to principles or values that have been established. There is much more to these definitions than may at first appear. Albert Einstein said that everything should be made as simple as possible but no simpler. However, it is an oversimplification to think that leaders lead and followers follow, because the relationship between leadership, management, and followers is a complex one. Also, leadership and management are often part of the same role because there is a continual adjustment of the direction (leadership) and controlling resources to achieve that direction (management). We can see the difference more clearly by looking at some examples - of leadership without management, and management without leadership.

## **Report – Report can be typed or hand written for up to two pages.**

What is Java technology and why do I need it? Java is a programming language and computing platform first released by Sun Microsystems in 1995. There are lots of applications and websites that will not work unless you have Java installed, and more are created every day. Java is fast, secure, and reliable. From laptops to datacenters, game consoles to scientific supercomputers, cell phones to the Internet, Java is everywhere! Is Java free to download? Yes, Java is free to download. If you are building an embedded or consumer device and would like to include Java, please contact Oracle for more information on including Java in your device. Why should I upgrade to the latest Java version? The latest Java version contains important enhancements to improve performance, stability and security of the Java applications that run on your machine. Installing this free update will ensure that your Java applications continue to run safely and efficiently.

## **MORE TECHNICAL INFORMATION**

What will I get when I download Java software?

The Java Runtime Environment (JRE) is what you get when you download Java software. The JRE consists of the Java Virtual Machine (JVM), Java platform core classes, and supporting Java platform libraries. The JRE is the runtime portion of Java software, which is all you need to run it in your Web browser. What is Java Plug-in software? The Java Plug-in software is a component of the Java Runtime Environment (JRE). The JRE allows applets written in the Java programming language to run inside various browsers. The Java Plug-in software is not a standalone program and cannot be installed separately. I have heard the terms Java Virtual Machine and JVM. Is this Java software? The Java Virtual Machine is only one aspect of Java software that is involved in web interaction. The Java Virtual Machine is built right into your Java software download, and helps run Java applications.
